

PROFILE

Senior Product Manager with 7+ years of experience building AI/ML-powered products at scale - specializing in personalization, recommendation systems, & demand-supply optimization. Proven track record of shipping data-driven products that drive measurable growth: from real-time dynamic pricing models to gamified engagement systems. Deep cross-functional experience owning end-to-end product lifecycle. ISB MBA + IIT (B.Tech). Skilled in Python (data analysis), SQL, A/B testing, & AI prototyping

EDUCATION

INDIAN SCHOOL OF BUSINESS (ISB) | MBA - Strategy and Marketing Hyderabad (India), Jun'20 - Aug'21
• CGPA: 3.72/4 - Awarded **silver medal** for stellar academic performance, secured the badge of prestigious **Dean's List (top 10%)**

INDIAN INSTITUTE OF TECHNOLOGY (IIT), HYDERABAD | B.TECH - Electrical Engineering Hyderabad (India), Aug'13 - May'17
• CGPA: 8.71/10 (**top 10%**); internships: Murata Singapore (international offer, got PPO), LG Electronics India (got award from MD)

PROFESSIONAL EXPERIENCE (7+ years)

LINEMAN WONGNAI | Lead Product Manager Gurgaon (India) & Bangkok (Thailand), Oct'22 - Present

Thailand's #1 on-demand food & grocery delivery platform (1M+ orders/d); subsidiary of LINE Corp. (social networking platform - Japan). Own the fulfillment/logistics product for 100K+ delivery partners across Thailand

Scope: Demand-supply balancing, real-time rider matching (AI/ML), pricing personalization, route optimization, rider experience

Key AI/ML initiatives:

- Built a dynamic real-time **AI pricing model** for rider compensation that adjusts offer prices based on live supply-demand signals saving 7-8M THB/m (**\$220K USD**) with a roadmap to reach 10M THB/m (**\$285K USD**). Zero degradation in fulfillment rate
- Redesigned **rider incentives** from pure target-based cash payouts to in-app **virtual coin gamification** system; WAU up by 19% & ~3-4M THB/m (**~\$100K USD**) in non-wage cost savings. Building an **AI model** on top of the coin system to further personalize incentive triggers and increase cost efficiency
- Developed a personalized **AI recommendation system** that guides rider supply toward hidden demand hotspots in real time, achieved 65% adoption rate and 90% feature effectiveness; reduced **rider idle time** and cut peak unmatched orders
- Launched an **ML-based rider goodness score** that prioritizes high-performing riders during oversupply periods, optimizing across income/hour, orders/hour, and cost/trip - improving **supply quality** without increasing user-waiting-time

Other Product initiatives:

- Introduced batch order optimization to replace single-order **distribution logic**, increased bundle rate by **~20 percentage point**
- Launched a lightweight **rules-based order difficulty system** in 2 weeks to generate early signals for pricing adjustments - validated the **hypothesis**, then absorbed learnings into the core **AI pricing model** once sufficient data existed
- Built an internal **bulk-pricing tool** to enable nationwide price updates in **1-click**, eliminating 25 manual hours/w of Ops work
- Designing a **wait-time** comp. scheme for riders at high-cook-time merchants, projected to **improve match rate** & cancellations
- Introduced **incentive history feature** for riders to get confirmation of yesterday's income; reduced **CS case: 5000/d to near 0**

Leadership & stakeholder Management:

- Sole PM leading the cross-geo squad of **10+ engineers/QA**; run all sprint grooming, planning, stand-ups and retro sessions
- Monitor dashboard of key business metrics with Operations daily, align product roadmap with leadership on bi-weekly basis
- Review SQL dashboards with BI team weekly; support **UX research** interviews, run **A/B tests** & monthly **focus group** sessions

WALMART | Associate Product Manager Bangalore (India), Aug'21 – Sep'22

Scope: PM of **in-store fulfillment app** (used to manage ~1M eCommerce orders/d) in last-mile delivery (LMD) team for US/CAN

Key initiatives:

- Eliminated critical **GMV leakage point** in delivery flow: app previously required associates to manually tap "loaded" for every order placed in van - failure point led to **~10K lost orders/m**. Redesigned the flow to remove dependency & recover GMV loss
- Overhauled the **order incident management** system to allow associates to log all customer delivery complaints in under 30 seconds using structured pre-defined inputs - down from a manual long-form process that took **7+ minutes** per issue
- Launched a new warning feature to **prevent booking multiple drivers** for same orders to reduce delivery cost by **\$30K/m**
- Led **platformization** of Dispatcher app to onboard WM Canada & Mexico as new clients, expanded scope to 2 new region
- Revamped **15+** screens of the mobile app to Walmart's Design System for consistent **omni-channel UX** across device types
- Ran weekly 4-in-the-box (product/engineer/business/design) meetings to track releases, get leadership teams alignments
- Worked with cross-geo engineering team (**10+**), provide clear requirements, prioritize tasks, manage sprint backlog & planning

MURATA ELECTRONICS SINGAPORE | Product Marketing Associate - IoT Singapore, Jul'17 - May'20

Scope: Led GTM and new business development for IoT products across Smart Home, Smart Cities, and Industry 4.0 verticals

- **Product launch:** Keynote speaker at AWS Summit Singapore with live demo (**700+ attendees** - industry leaders & media)
- Built a 0-to-1 **cloud-based Predictive Maintenance solution**, generating \$1M+ USD qualified pipeline from \$4K investment
- Introduced **remote locking** concept with **Cellular IoT/LTE mock-ups** to smart lock maker for **Airbnb** (660K home listings in US)
- Built a **smart home** multimedia solution for **Panasonic** using Amazon Voice Services SDK (**Alexa**) installed in **~780K units** in US

SKILLS & TOOLS

Product: Roadmapping, PRD writing, A/B testing, UX research, GTM, BI dashboards, funnel analysis, cohort analysis, JIRA, Figma

AI/ML: Python, Claude code, Co-pilot, AI prototyping, feature scoping, trade-off analysis, LLM and RAG familiarity
